PROFESSIONAL SUMMARY

Engineering student with strong foundations in C and C++, focused on data structures, algorithms and problem-solving. Demonstrates a solid understanding of software development principles and system design concepts through academic projects. Eager to apply technical skills to build efficient, scalable solutions in a professional environment.

EDUCATION

Graphic Era Hill University <i>B.Tech in Computer Science and Engineering</i>	Aug 2023 - Present CGPA: 8.4/10.00
Sri Chaitanya Techno School <i>Class XII, CBSE</i>	May 2023 Percentage: 80
Gautam International School <i>Class X, CBSE</i>	May 2021 Percentage: 97

SKILLS

Languages	C, C++, Python, SQL, JavaScript, HTML, CSS
Technologies	React, Node.js, Express, Flask, MySQL, MongoDB
Tools	Git, GitHub, VS Code, Postman, Jupyter, IntelliJ
Soft Skills	Time Management, Problem-Solving, Adaptability, Team Collaboration
Relevant Coursework	Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, Database Management System

PROJECTS

Disaster Management System <i>Python, Flask, MySQL, HTML, JavaScript, Tkinter</i>	April 2026 - May 2026
- Developed a Disaster Management and Relief Coordination System to centralize operations like disaster tracking, camp management, resource allocation, and volunteer coordination. - Implemented role-based access control with admin, coordinator, and volunteer roles, ensuring secure and structured workflow management across different operational levels. - Built core features such as resource shortage detection, donation allocation (manual and automated), dashboard analytics, and report generation to support real-time decision-making.	
Invisible Keylogger Shield <i>Flask, Flask-SocketIO, HTML, JavaScript, Chart.js</i>	Feb 2026 - March 2026
- Developed a real-time security system to detect and block keyloggers using heuristic rules and behavioral analysis. - Built a threat scoring mechanism (0-10 scale) to classify processes as safe, suspicious, or critical and enable process termination. - Implemented a live monitoring dashboard with analytics and detection history for better visibility.	
Urban Guardian <i>React, Node.js, JavaScript, MySQL, Socket.IO, Leaflet.js</i>	Nov 2025 - Dec 2025
- Developed a real-time safety mapping application that enables users to report incidents instantly on an interactive map. - Implemented real-time geospatial analytics and hotspot detection, enabling identification of incident-prone areas through clustering, proximity alerts, weather-aware risk assessment, and interactive safety visualizations. - Implemented live incident tracking with instant updates across all connected devices using Socket.IO.	

ACHIEVEMENTS

- Finalist, CodCom 2.0 (2025):** Ranked among the top finalists out of 900+ participants in an ICPC-style competitive programming contest organized by IIT Ropar.
- Semi-Finalist, Smart India Hackathon (2025):** Recognized among 1,60,000+ applicants for solving real-world problems while debugging, troubleshooting, and resolving software issues.
